NAVIGATOR CASE MANAGEMENT INTERVENTION

Navigator Case Management (NCM) is a 12-month intervention for people with HIV who are incarcerated and are leaving to return to the community. The intervention leverages harm reduction, prevention case management, and Motivational Interviewing techniques to promote healthy behaviors.

People with HIV, who are currently incarcerated and are returning to the community

The Challenge

An estimated one in seven people with HIV leave prison or jails each year in the United States, and many struggle to access care and treatment upon release, with as many as 95 percent experiencing a gap in HIV treatment. HIV prevalence rates among Black people are disproportionality high, and within prison systems, they constitute the highest proportion of people with HIV.

NCM addresses the challenges faced by incarcerated individuals who are returning to the community by using a patient navigation-enhanced case management approach to support engagement in HIV care. The model leverages the expertise of patient navigators who assist case managers with monitoring client's adherence to care and who mentor and counsel clients before and after their release from jail.

San Francisco County Jail

Clients were twice as likely to be linked to care within 30 days of being released from jail and were almost twice as likely to be retained in care during the intervention period. Individuals who received treatment for substance use disorders were four times as likely to be linked to care upon release.¹

NASTAD's Center for Innovation and Engagement (CIE) is funded by HRSA's HIV/AIDS Bureau (HAB), Special Projects of National Significance (SPNS) under a three-year initiative entitled Evidence-Informed Approaches to Improving Health Outcomes for People with HIV (PWH). The purpose of this initiative is to identify, catalog, disseminate, and support the replication of evidence-informed approaches and interventions to engage people with HIV who are not receiving HIV health care or who are at risk of not continuing to receive HIV health care.
